SUMMARY

As a Senior Full stack developer, I'm committed to integrity, attention to detail, and excellence. For me programming is less of a vocation and more of a way of life that continually challenges my personal and professional growth. What started from first rendering "hello world" in my console has blossomed into a full-fledged passion. My keen eye for design has seen increased revenue for numerous eCommerce clients.

I am proficient in JavaScript Framework (Angular, Node.js, Next.js, Remix, Nest.js, React, Redux, Typescript) and PHP Framework (CI, Laravel), python, Django, Blockchain, Web3.js and I am continually expanding my skills into related technologies as their creative and developmental applications are exciting and endless.

I'm primarily a front-end developer, but I'm also familiar with Node, MEAN, MERN, Laravel and full stack development. Ultimately, I get my sense of fulfillment when the fruits of my labor exceed your expectations, and I am in constant competition to outdo my previous work so I can continuously meet that end.

It's my hope that we will be in touch soon, and that I will become a valuable and contributing member to your vision.
